PROFESSIONAL SUMMARY

Software Engineer and Apache Committer specializing in high-performance backend systems, networking, and distributed architectures. Proven track record in open-source development with 400+ GitHub contributions in the past year, including core commits to Apache, gRPC, Qiskit, and Cucumber. Expert in Go, Python, and Rust, experienced in Test-Driven Development (TDD) and delivering client-facing software.

EDUCATION

University at Buffalo, SUNY

Bachelor of Science in Computer Science (Expected May 2028)

Buffalo, NY
August 2026 - Present

Baruch College/CUNY, Weissman School of Arts and Sciences

Undergraduate Coursework in Computer Science (Transferred)
Dean's List (All Semesters). GPA: 3.91 / 4.00.

New York, NY
January 2025 - May 2026

Changsha University of Science & Technology

Undergraduate Coursework in Software Engineering (Transferred)

Changsha, Hunan
September 2022 - August 2024

EXPERIENCE

Committer | *Apache Iggy (Apache Software Foundation)*

June 2025 - Present

- Develop and maintain the Go SDK, implementing new features and fixing bugs across the message queue ecosystem.
- Contribute to the Rust server core when SDK work surfaces server-side issues.
- Maintain CI pipelines, unit testing, and BDD tests, increasing code coverage and improving SDK reliability.
- Review PRs related to Go, Rust, and tests; mentor new contributors on codebase conventions.

PROJECTS & OPEN SOURCE

Serify | *Creator*

July 2026 - Present

- Built an open-source cross-language serialization conformance framework that verifies byte-identical (or semantically identical) output across 9 program language implementations from a single shared schema.
- Designed a YAML-based schema DSL, NDJSON worker protocol, and Go CLI to drive polyglot worker processes through a common test suite and diff their results.
- Implemented detection of unsafe serialization behaviors including mutation, non-determinism, and buffer aliasing.
- Configured GitHub Actions CI across all supported languages with local reproduction via act.

HOLD Cloud Desktop Service Platform | *Backend Developer & DevOps*

January 2024 - April 2024

- Implemented container desktop operations including create, start, delete, scale, file transfer, and VNC access.
- Built a real-time distributed monitoring system for CPU, memory, and network metrics, using Redis locks to prevent race conditions and duplicate monitoring tasks.
- Authored comprehensive deployment, API, and user documentation.

Open-Source Contributions | *contributor*

- Merged core bug fixes and features into major industry repositories, including surfacing HTTP/2 transport layer diagnostics in grpc-go for non-gRPC data, unsigned integer support in cucumber/godog, and correcting factual inaccuracies in Qiskit documentation.

SKILLS

Programming Languages: Go, Rust, TypeScript/JavaScript, Java, C++, Python, Kotlin

Backend & Data: Gin, gRPC, SQL, Redis, etcd, Node.js, Spring Boot, Message Queue, pandas

Frontend: React, Next.js, Material UI

Tools: Git, Docker, Linux, GitHub Actions, CI/CD

Practices: Test Driven Development (TDD), Behavior Driven Development (BDD)
